OBJECTIVE

Computer Science undergraduate specializing in AI & ML, with hands-on experience in RAG systems, NLP pipelines, and computer vision. Built end-to-end projects using Python, LangChain, TensorFlow, and Streamlit. Seeking an entry-level ML or Software Engineer role to build production-grade AI systems.

TECHNICAL SKILLS

Languages: Python, Java, HTML, CSS,SQL

ML / AI Frameworks: TensorFlow, Scikit-Learn, NumPy, Pandas, Matplotlib, LangChain, Hugging Face.

ML Concepts: Supervised & Unsupervised Learning, RAG, NLP, Computer Vision, Collaborative Filtering, Content-Based Filtering, Model Evaluation , Vector Embeddings.

Databases: SQL, NoSQL, ChromaDB (vector store)

Tools & Platforms: GitHub, Streamlit, Jupyter Notebook, VS Code, OpenCV, PyCharm.

PROJECTS

Pdf Chat Assistant Using RAG [[GitHub repo](#)]

Python / Streamlit / LangChain / Groq LLaMA-3 / Chroma

- Built an end-to-end Retrieval-Augmented Generation (RAG) pipeline enabling natural language querying over large PDF documents, reducing manual document search time significantly.
- Implemented semantic vector retrieval using ChromaDB with chunk-based text splitting and embedding strategies to ensure grounded, accurate answers from source documents.
- Integrated Groq-hosted LLaMA-3 as the inference backend, achieving low-latency responses suitable for real-time user interaction.

Real-Time Face Mask Detection [[GitHub repo](#)]

Python / Jupyter Notebook / OpenCV / Tensorflow

- Developed and trained a deep learning computer vision model to classify masked vs. unmasked faces in real time, achieving high accuracy across multiple benchmark datasets.
- Integrated live webcam-based detection using OpenCV, enabling real-time inference at the edge without external server dependency.
- Tested model robustness across varied lighting conditions and facial angles, iterating on dataset augmentation to improve generalization.

Music Recommendation System [[GitHub repo](#)]

Python / Pycharm / Streamlit / Kaggle

- Built a hybrid music recommendation engine combining collaborative filtering and content-based filtering to deliver personalized song suggestions based on user preferences and audio features.
- Processed and cleaned over 1 million song records from Spotify MillionSongData and songs.csv datasets using Pandas, handling missing values and normalizing feature vectors.
- Deployed an interactive Streamlit web app allowing users to search songs and receive recommendations in real time.

EDUCATION

B.Tech Computer Science and Engineering(AI & ML)

CMR University

CGPA : 8.4 / 10

November 2022 - Present

Bengaluru, India

Board of Intermediate Education (89.6%)

Sri Chaitanya Junior College

May - 2022

Tirupati, India

INTERNSHIP

Python Programming Internship - YBI Foundation

July 2024

- Developed Python automation scripts for data-processing tasks, applying functions, file I/O, loops, and core data structures in real assignment contexts.
- Solved 15+ logic-based programming challenges, strengthening problem-solving skills and code efficiency.

CERTIFICATIONS

- Certified in **AI Infrastructure and Operations Fundamentals** by NVIDIA. [Link](#)
- Certified in **JAVA** by Udemy. [Link](#)
